

Over 100 fire scientists urge the western U.S. to forego fireworks this Fourth of July

June 30, 2021

The July 4th weekend in the United States this year will be like no other we've experienced in the nation's history. The extreme heat impacting the northwestern United States and Canada this week comes on top of an already record-setting drought across much of western North America. This is setting the stage for widespread fire activity.

We are gravely concerned about the potential for humans to accidentally start fires – from fireworks and other activities – by adding ignitions to this combination of historic drought, heat, and dry vegetation.

We urge people to skip the fireworks this July 4th and to avoid other activities that could start an unintentional wildfire. This will be critical for a safe Independence Day holiday, good practice for the rest of the fire season, and one way we can adapt to more safely live in increasingly flammable landscapes.

Name	Affiliation
Barbara Bomfim	Berkeley National Lab
Megan Dolman	Boise State University
Mojtaba Sadegh	Boise State University
Luke Montrose	Boise State University
Carson MacPherson-Krutzky	Boise State University
Chris Jakober	California Air Resources Board
Alan Tepley	Canadian Forest Service
Winslow Hansen	Cary Institute of Ecosystem Studies
Megan Walsh	Central Washington University
Jennifer Lipton	Central Washington University
Rebecca Barnes	Colorado College
Andreas Wion	Colorado State University
Wade Tinkham	Colorado State University
Monique Rocca	Colorado State University
Courtney Schultz	Colorado State University
Sarah Hart	Colorado State University
Camille Stevens-Rumann	Colorado State University
Arianna Varuolo-Clarke	Columbia University
Caitlin Littlefield	Conservation Science Partners
Wynne Moss	Conservation Science Partners
Nathan Mietkiewicz	CoreLogic

John Kominoski	Florida International University
Jennifer Russell	Idaho Department of Lands
Morey Burnham	Idaho State University
